A third-year Software Engineering student, oriented towards full-stack development. Experienced in building and deploying web applications, using Java and Spring Boot for the backend, ReactJS for the frontend, along with tools like Docker and Git. Eager to apply learned skills and knowledge to real-world projects, thereby contributing to and growing with the company.

SKILLS

Backend Development: Java, Spring Boot, Spring Data JPA, Spring Security, RESTful API, JWT

Frontend Development: JavaScript, ReactJS, HTML5, CSS3, Tailwind CSS

Databases: MySQL, PostgreSQL, MSSQL

DevOps & Tools: Docker (Basic), Git, GitHub, Postman, VS Code

Fundamentals: Object-Oriented Programming (OOP), Data Structures & Algorithms, Design Patterns

PROJECTS

E-Commerce System - Template Shop

May 2025 - Aug 2025

Role: Full-stack Developer

Technologies: Java 21, Spring Boot, ReactJS, MySQL, Docker, Git.

Description:

- Developed a complete e-commerce platform from scratch, handling both frontend and backend responsibilities.
- Built a responsive user interface with ReactJS, managing state and component lifecycle.
- Designed and implemented RESTful APIs using Spring Boot for core functionalities like user management, product catalog, and order processing.
- Integrated Spring Security with JWT for robust authentication and authorization.

Url Shortener System

Aug 2025 - Aug 2025

Role: Backend Developer

Technologies: Java 17, Spring Boot, PostgreSQL, Docker, Git.

Description:

- Built a backend API system to convert long URLs into unique, short aliases.
- Designed a PostgreSQL database schema to efficiently store and retrieve URL mappings.
- Containerized the application using Docker for consistent deployment and scalability.
